                                        Contacting the cells with calreticulin (or its fragments). Erugments of calreticulin causes at least 40% inhibition of anglogenesis, tumor growth und/or endothelial cell growth (claimed). The method may be used for inhibiting anglogenesis in a patient. The anglogenesis is associated with a disease other than a tumor that is associated with new accordance of the removation (e.g. diabetic neuropathy, retrolental fibroplasia, truchoma, neovascularization, psoriasis, anglofibromas, immune inflammation, atheroscierosis, excessive wound repair, retinal neovascularization, macular degeneration, corneal graft rejection, contact lens overwear, Crohn's disease, non-immune inflammation, contact lens systemic lupus exythroaditis, contact lens systemic lupus exythroaditis, solecodemic syndrome, sarcoidosis and primary biliary cirrhosis). The method may also used for treating/inhibiting tumor growth especially

Fragments of calreticulin causes at least 40% inhibition of anglogenesis, tumor growth and/or endothelial cell growth (claimed). The method may be used for inhibiting angiogenesis in a patient. The angiogenesis is associated with a disease other than a tumor that is associated with necvascularization (e.g. diabetic neuropethy, retrolental fibroplasia, trachoma, necvascular glaucoma, psoriasis, angiofibromas, immune inflammation, atherosclerosis, excessive wound repair, retinal necvascularization, macular degeneration, corneal graft rejection,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Inhibiting endothelial cell growth and angiogenesis using calreticulin,
used for inhibiting angiogenesis in a patient. The angiogenesis is associated with a disease other than a tumor that is associated with neovascularization (e.g. diabetic neuropathy, retrolental fibroplasia, trachoma, neovascular glaucoma, psoriasis, angiofibromas, immune inflammation, atherosclerosis, excessive wound repair, retinal neovascularization, macular degeneration, corneal graft rejection, contact lens overwear, Crohn's disease, non-immune inflammation, rheumatoid arthritis, systemic lupus erythromatosus, thyroiditis, Goodpasture's syndrome, systemic vasculitis, scleroderma, Sjorgen's syndrome, sarcoldosis and primary billary cirrhosis). The method may also be used for treating/inhibiting tumor growth especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MBP-calreticulin, maltose binding protein; vasostatin; N-terminal; anglogenesis; inhibition; endothelial cell; anti-anglogenic; neuroprotective; antidiabetic; cytostatic; dermalogical; hepatic; immunosuppressive; antidialmanatory; anti-atherosclerotic; gastrointestinal; anti-arthritic; ophthalmic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ;

A novel method of inhibiting endothelial cell growth comprises

C contacting the calls with calreticulin (or its fragments/variants).

Fragments of calreticulin causes at least 40% inhibition of angiogenesis, tumor growth and/or endothelial cell growth (claimed). The angiogenesis, tumor growth and/or endothelial cell growth (claimed). The canglogenesis is associated with a disease other than a tumor that is associated with neovascularization (e.g. diabetic neuropathy, retrolental clibroplasia, trachoma, neovascular glaucoma, psoriasis, angiofibromas, immunue inflammation, atheroscolerosis, excessive wound repair, retinal covascularization, macular degeneration, corneal graft rejection, contact lens overwear, Crohn's disease, non-immune inflammation, contact lens overwear, crohn's disease, non-immune inflammation, contact lens systemic lupus erythromatosus, thyroiditis, contact lens systemic lupus erythromatosus, thyroiditis, condopasture's syndrome, systemic vasculitis, scleroderma, Sjorgen's syndrome, sarcoidosis and primary bliliary cirrhosis). The method may also be used for treating/inhibiting tumor growth especially
                                                                                                                                                              ;

Recombinant human MBP-calreticulin comprises the sequence of human calreticulin (see AAY92349) without the 17 N-terminal amino acids.

A novel method of inhibiting endothelial cell growth comprises contacting the cells with calreticulin (or its fragments/variants).

Fragments of calreticulin causes at least 40% inhibition of anglogenesis, tumor growth and/or endothelial cell growth (claimed). The method may be used for inhibiting anglogenesis in a patient. The anglogenesis is associated with a disease other than a tumor that is associated with necvascular jalucoma, psoriasis, anglofibromas, immune inflammation, atherosclerosis, excessive wound repair, retinal neovascularization (anglogenesis) anglofibromas, immune inflammation, atherosclerosis, excessive wound repair, retinal neovascularization acuallar degeneration, corneal graft rejection, contact lens overwear, Crohn's disease, non-immune inflammation, chematoid arthitis, systemic lupus erythromatosus, thyroiditis,
                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               retrolental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            endothelial cell; anti-angiogenic; neuroprotective; antidiabetic; cytostatic; dermalogical; immunosuppressive; antiinflammatory; hepatic; anti-atherosclerotic; gastrointestinal; anti-arthritic; ophthalmic.

                                                                                                                                                                                                                                                                                                                                                       The present sequence is calreticulin. It and a C-domain derived peptide (AAM06736) are useful for treating a patient to inhibit restenosis. The calreticulin-type opds. are administered either parenterally, intravenously or via a catheter and can target areas of vascular damage to inhibit or prevent restenosis.

                                                                                                                                                                                                                                                                                 Ωp
                                                                                                                                                                                                                                                                                                                                                This sequence is calreticulin, a homologue of Clq and collectin receptor (CC1qR). The invention relates to the use of a cC1qR binding domain in a medicament to effect complement ubiquitin (CUB) functionality, and an inhibitor of the cC1qR binding domain in a medicament to inhibit cub functionality. The cC1qR binding domain, or its inhibitor, can be used to treat a human or animal body. Particularly an inhibitor, can be used to complement activation involved in the initiation and maintenance of inflammation, for example in myocardial infarction, brain ischaemia (stroke), gut ischaemia, rheumatoid arthritis, systemic lupus exthematosus, burns, immune complex nephritis, and to treat amyloid plaques in Alzheimer's disease. The use of cC1qR binding domain or inhibitor enables the CUB domain functionality to be modulated using a

contacting the cells with calreticulin (or its fragments/variants).

Fragments of calreticulin causes at least 40% inhibition of angiogenesis, tumor growth and/or endothelial cell growth (claimed). The method may be used for inhibiting angiogenesis in a patient. The angiogenesis is associated with a disease other than a tumor that is associated with neovascularization (e.g. diabetic neuropathy, retrolental fibroplasia, trachoma, neovascular glaucoma, psoriasis, angiofibromas, immune inflammation, atherosclerosis, excessive wound repair, retinal neovascularization, mecular degeneration, corneal graft rejection, contact lens overwear, Crohn's disease, non-immune inflammation, rheumatoid arthritis, systemic lupus erythromatosus, thyroiditis, Goodpasture's syndrome, systemic lupus erythromatosus, thyroiditis, condornen, sarcoidosis and primary biliary cirrhosis). The method may also be used for treating/inhibiting tumor growth especially Kaposi's sarcoma (claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Flea calreticulin protein PCtCall589 (AAW04171) is a calcium-binding protein found in the salivary glands of Ctenocephalides felis. Its amino acid sequence was deduced from a cDNA clone (AAT39516) obtd. from a salivary gland cDNA library. Recombinant PCtCall589 can be produced in host cells transformed with a vector carrying calreticulin nucleic acids. Calreticulin alters the blood feeding behaviour of haematophagous insects and can be administered to an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Haematophagous insect calreticulin protein - used to reduce insect infestation and desensitise patients to allergic dermatitis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Calreticulin; flea; haematophagous insect; allergic dermatitis; vaccine; therapy; PCtCal403.

Fragments of calreticulin causes at least 40% inhibition of angiogenesis, tumor growth and/or endothelial cell growth (claimed). The method may be used for inhibiting angiogenesis in a patient. The angiogenesis is ussociated with a disease other than a tumor that is associated with neovascularization (e.g. diabetic neuropathy, retrolental fibroplasis, trachom, neovascular glaucoma, psoriasis, andiofibromas, immune inflammation, atherosclerosis, excessive wound repair, retinal neovascularization, macular degeneration, conneal graft rejection, contact lens overwear, Crohn's disease, non-immune inflammation, rheumatchid arthritis, systemic lupus erythromatosus, thyroiditis, Gowdpusture's syndrome, systemic lusus erythromatosus, thyroiditis, syndrome, spatemic vasculitis, scleroderma Sjorgen's also be used for treating/inhibiting tumor growth especially

The sequence was deduced from a cDNA clone lambda RAL-1 prepd. from RAM isolated from nodules excised from patients infected with O. volvulus. The N-terminal is incomplete, however Abs which specifically bind to protein prepd. from induced cultures of lambda RAL-1 lysogens recognise a single polypeptide of mol. wt. 42.000 in extracts of adult worms. Analysis deduced sequence suggests that it encodes a protein of mol. wt. 39.130. If the antigen is not subject to post-translational processing this suggests that most of the coding sequence is present. The three repeats are highly hydrophilic regions likely to be exposed on the surface of the antigen and highly immunogenic. Recombinant antiginal and highly immunogenic. Recombinant can be used stimulate T-cells of individuals infected by the parasite to proliferate and may be used as the basis for a vaccine against Onchocerciasis or river
                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DNA encoding Onchocerca volvulos antigen – used to express recombinant antigen for vaccine against onchocerciasis or river

                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence represents the human neural cell adhesion molecule (NCAM) amino acid sequence. NCAM is found in three forms, two of which are transmembrane forms, while the third is attached via a lipid anchor to the cell membrane. All three NCAM forms have an extracellular structure consisting five immunoglobulin domains (Ig domains). The Ig domains are numbered 1 to 5 from the N-terminal. The invention relates to a compound bluds to NCAM-IgJ/Ig2 domains, and is capable of stimulating or promoting neurite outgrowth from NCAM presenting cells, and is also capable of promoting the proliferation of NCAM presenting cells. The compound may be used in the treatment of normal, degenerated or damaged NCAM presenting cells. The compound may lead to the compound may in particular be used to treat diseases of the

Also provided is a method for inhibiting synaptic stability in a mammal that comprises administering to a mammal a therapeutically effective amount of a CAM agent that inhibits cadherin-mediated adhesion, where the agent comprises a cyclic peptide having a peptide ring, and where the sequence His-Ala-val is present within the peptide ring, and where the sequence His-Ala-adhesion modulating agents that inhibit cadherin-mediated adhesion. They can be used in a method for inhibiting synaptic stability in mammals. The agents can be used in a method for inhibit manalism of the conditions characterized by undesirable cell adhesion or to facilitate drug delivery to a specific
                  damage, traumatic nerve damage, impaired myelination of nerve fibres, conditions resulting from a stroke, Parkinson's disease, Alzheimer's conditions resulting from a stroke, Parkinson's disease, Alzheimer's disease, dementiats, sclerosis, nerve degeneration associated with elections affecting the circadian clock or neuro-muscles mellitus, disorders affecting the circadian clock or neuro-mascles mellitus, disorders affecting the circadian clock or neuro-mascles may also be treated with the compound, such as conditions associated with impaired function of neuromuscular connections (e.g. genetic or traumatic shock or traumatic atrophic muscle disorders). Conditions of the gonads, pancreas (e.g. diabetes mellitus types I and II), kidney (e.g. nephrosis), heart, liver and bowel may also be treated using the compound. The compound is used in a prosthetic nerve guide, and also to stimulate the ability to learn, and to stimulate the memory of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

The invention relates to methods using cadherin modulating agents, particularly paptides containing the sequence HAV or antibodies, for enhancing or inhibiting cadherin-mediated cell adhesion. The methods can be used to treat diseases or other conditions characterized by undestruble cell adhesion or to facilitate drug delivery to a specific tissue or tumnour (such as bladder tumnours, ovarian tumnours or melanomas). They can also be used to enhance cell adhesion (e.g. supplement or replace stitches or to facilitate wound healing). They can also be used for enhancing and/or directing neurite outgrowth. The methods can also be used for tenating damyelinating neurite outgrowth. The methods can also be used for treating damyelinating neurite outgrowth. The methods can also be used for enhancing damyelinating neurological disease, e.g. multiple electrosis. The methods can also be used for e.g. enhancing drug delivery, treating cancers (such as carcinomas, leukenia or melanomas), inhibiting andogenesis, encoderin expressing cells, e.g. for treating andogenesis in cadherin-expressing cells, e.g. for treating cancers (such a treating adhesion of foreign tissue implanted in a mammal, interest or theumatoid arthritis, modulating the immune system, for preventing preventing preventing spinal cord injuries or inhibiting synaptic stability, treating spinal cord
                                                                                                                                                                                                 ö
tissue or tumour. Alternatively the agents may be used to enhance cell adhesion (e.g. to supplement or replace stitches or to facilitate wound healing) or to enhance or direct neurite outgrowth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cadherin; modulating agent; cadherin-mediated cell adhesion; cancer; drug delivery; bladder timour; ovarian tumour; melanoma; cell adhesion; wound healing; neurite outgrowth; demyelinating neurological disease; multiple sclerosis; carcinoma; leukemia; melanoma; unglogenesis; CAR; apoptosis; diabetes; rheumatoid arthritis; immune system; pregnancy; vusopermeability; spinal cord injury; synaptic stability.
                                                                                                                                                                                                 Gaps

Bicohim. Biophys. Acta 1158:339-344(1993).
-!- FUNCTION: THIS PROTEIN BINDS CALCIUM. THERE ARE BOTH HIGH AND LOW AFFINITY CALCIUM BINDING SITES.
-!- SUBGRILLIAR LOCATION: ENDOPLASMIC RETICULUM LUMEN.
-!- SUBGRILLIAR LOCATION: ENDOPLASMIC RETICULUM LUMEN.
-!- SIMILARITY: BELONGS TO THE CALREFICULIN FAMILY.
-!- CAUTION: MAS ORIGINALLY (REE. 2) THOUGHT TO BE D-BETA-HYDROXYBUTYRATE DEHYDROGENASE.
                                                                           MEDLINE-91054414; PubMed-2241926; Arvers S., de Mattei M., Lanfredi M., Villa A., Green N.M., Maclennan D.H., Meddolesi J., Pozzan T.; "Calreticulin is a candidate for a calsequestrin-like function in

-!- FUNCTION: THIS PROTEIN BINDS CALCIUM. THERE ARE BOTH HIGH AND LOW AFFINITY CALCLUM-BINDING SITES.
-!- SUBGURIT: MONOMER (BY SIMILARITY).
-!- SUBCELLULAR LOCATION: ENDOPLASMIC RETICULUM LUMEN.
-!- SIMILARITY: BELONGS TO THE CALREFICULIN FAMILY.

-!- FUNCTION: THIS PROTEIN BINDS CALCIUM. THERE ARE BOTH HIGH AND LOW AFFINITY CALCIUM-BINDING SITES.
-!- SUBCELLULAR LOCATION: ENDOPLASMIC RETICULUM LUMEN.
-!- SIMILARITY: BELONGS TO THE CALRETICULIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                     "A C. elegans gene encodes a protein homologous to mammalian

Submitted (OCT-1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: THIS PROTEIN BINDS CALCIUM. THERE ARE BOTH HIGH AND
LOW AFFINITY CALCIUM-BINDING SITES (BY SHILLARITY).
-!- SUBCELLULAR LOCATION: BENDOPLASMIC RETICULUM LUMEN (BY SIMILARITY).
-!- SIMILARITY: BELONGS TO THE CALRETICULIN FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              apricot (Prunus armeniaca cv. Bergeron).";
Submitted (MAR-1999) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: THIS PROTEIN BINDS CALCIUM. THERE ARE BOTH HIGH AND
LOW AFFINITY CALCIUM-BINDING SITES (BY SIMILARITY).
-!- SUBCELLULAR LOCATION: ENDOPLASMIC RETICULUM LUMEN (BY SIMILARITY).
-!- SIMILARITY: BELONGS TO THE CALRETICULIN FAMILY.

"Cloning the CDNA encoding a calcium-binding protein which involved in

"Cloning the CDNA encoding a calcium-binding protein which involved in

the regeneration of rice cultured suspension cells.";

Submitted (DEC-1998) to the EMBL/GenBank/DDBJ databases.

- FUNCTION: THIS PROTEIN BINDS CALCIUM. THERE ARE BOTH HIGH AND

LOW AFFIRITY CALCIUM-BINDING SITES (BY SIMILARITY).

- SUBCKLIDLAR LOCATION: ENDOPLASMIC RETICULUM LUMEN (BY SIMILARITY).

- SIMILARITY: BKLONGS TO THE CALRETICULIN FAMILY.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Recombinant human MBP-calreticulin comprises the sequence of human calreticulin (see AAY93149) without the 17 N-terminal amino acids. A novel method of inhibiting endothelial cell growth comprises contacting the cells with calreticulin (or its fragments/variants). Fragments of calreticulin causes at least 40% inhibition of unglogenesis, tumor growth and/or endothelial cell growth (claimed). The method may be used for inhibiting anglogenesis in a patient. The nathod may be used for inhibiting anglogenesis in a patient. The inglogenesis is associated with a disease other than a tumor that is ussociated with meovascularization (e.g. diabetic neuropathy, retrolnetal ibrophasia, trachoma, neovascular glaucoma, psoriasis, anglofibromas, immunot inflammation, atherosclerosis, excessive wound repair, retinal neovascularization, macular degeneration, corneal graft rejection, contact lens overwear, Crohn's disease, non-immune inflammation, contact lens overwear, Crohn's disease, non-immune inflammation, contact lens overwear, crohn's disease, non-immune inflammation, systemic vasculitis, acleroderma, Sjorgen's syndrome, sarcoldosis and primary billary cirrhosis). The method may wanced the used for treating/inhibiting tumor growth especially

Synthetic peptides corresp. to an epitopic core of Ro antigen are expressed recombinantly to detect autosmetibodies, for identification of autoimmune diseases. These epitopes are AAs 24-36, 23-36, 188-209, or 241-255. The peptides may be substd. for ribonucleoprotein particle

contacting the cells with calreticulin (or its fragments/variants). Fragments of calreticulin causes at least 40% inhibition of angiogenesis, transment growth and/or endothelial cell growth (claimed). The method may be used for inhibiting angiogenesis in a patient. The angiogenesis is associated with a disease other than a tumor that is associated with neovascularization (e.g. diabetic neuropathy, retrolental fibroplasia, trachoma, neovascular glaucoma, psoriasis, angiofibromas, immune inflammation, atherosclerosis, excessive wound repair, retinal neovascularization, macular degeneration, corneal graft rejection, contact lens overwear, Crohn's disease, non-immune inflammation, rheumatoid arthritis, systemic lupus erythromatosus, thyroiditis, syndrome, systemic lusus erythromatosus, thyroiditis, syndrome, sarcoidosis and primary biliary cirrhosis). The method may also be used for treating/inhibiting tumor growth especially
A novel method of inhibiting endothelial cell growth comprises

This sequence is calreticulin, a homologue of Clq and collectin receptor (CClqR). The invention relates to the use of a cClqR binding domain in a medicament to effect complement ubiquitin (CUB) functionality, and an inhibitor of the cClqR binding domain in a medicament to inhibit CUB functionality. The cClqR binding domain, or its inhibitor, can be used to treat a human or animal body. Particularly an inhibitor is used to complement activation involved in the initiation and maintenance of inflammation, for example in mycoradial infarction, brain ischaemia (stroke), gut ischaemia, rheumatoid arthritis, systemic lupus
                                                                                                                                                                                                                                                                      Clq and collectin receptor; cClqR binding domain; complement ubiquitin; CUB functionality; inhibitor; complement activation; inflammation; myocardial infarction; brain ischaemia; gut ischaemia; amyloid plaque; rheumatoid arthritis; systemic lupus erythematosus; Alzheimer's disease; immune complex nephritis; therapy.

                                                                                                                                                                                                                                                                                                                                         The present sequence is calreticulin. It and a C-domain derived peptide (AAW06736) are useful for treating a patient to inhibit restenosis. The calreticulin-type opds. are administered either parenterally, intravenously or via a catheter and can target areas of vascular damage to inhibit or prevent restenosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                         104 DMHGDSEYNIMFGPDICGPGTKKVHVIFNYKGKNVLINKDIRCKDDEFTHLYTLIVRPDN 163

A novel method of inhibiting endothelial cell growth comprises

contacting the cells with calreticulin (or its fragments/variants).

Exagments of calreticulin causes at least 40% inhibition of andiogenesis,

tumor growth and/or endothelial cell growth (claimed). The method may be

used for inhibiting angiogenesis in a patient. The angiogenesis is

associated with a disease other than a tumor that is associated with

neovascularization (e.g. diabetic neuropathy, retrolental fibroplasia,

trachoma, neovascular glaucoma, psoriasis, angiofibromas, immune

inflammation, atherosclerosis, excessive wound repair, retinal

contact lens overwear, Crohn's disease, non-immune inflammation,

cheumatoid arthritis, systemic lupus erythromatosus, thyroiditis,

coodpasture's syndrome, systemic vasculitis, soleroderma, Sjorgen's

syndrome, sarcoidosis and primary biliary cirrhosis). The method may

also be used for treating/inhibiting tumor growth especially

Kaposi's sarcoma (claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    MBP-calreticulin; maltose binding protein; angiogenesis; inhibition; endothelial cell; anti-angiogenic; neuroprotective; antidiabetic; cytostatic; dermalogical; immunosuppressive; antilnflammatory; heptic; anti-atherosclerotic; gastrointestinal; anti-arthritic; ophthalmic.

This sequence comprises recombinant human calreticulin (AAY92350)

missing the N-terminal 120 amino acids.

A novel method of inhibiting endothelial cell growth comprises

contacting the cells with calreticulin (or its fragments/variants).

Eragments of calreticulin causes at least 40% inhibition of
angiogenesis, tumor growth and/or endothelial cell growth (claimed). The
method may be used for inhibiting angiogenesis in a patient. The
angiogenesis is associated with a disease other than a tumor that is
associated with neovascularization (e.g. diabetic neuropathy, retrolental
cit libroplasia, trachoma, neovascular glaucoma, psoriasis, angiofibromas,
immune inflammation, atherosclerosis, excessive wound repair, retinal
contact lens overwear, Crohn's disease, non-immune inflammation,
contact lens overwear, Crohn's disease, non-immune inflammation,
contact lens verwear, systemic vasculitis, scleroderma, Sjorgen's
syndrome, sarcoidosis and primary biliary cirrhosis). The method may
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MBP-calreticulin; maltose binding protein; angiogenesis; inhibition; endothelial cell; anti-angiogenic; neuroprotective; antidiabetic; cytostatic; dermalogical; immunosuppressive; antiinflammatory; hepatic; anti-atherosclerotic; gastrointestinal; anti-arthritic; ophthalmic.
                                                                                                                                                                                                                                          Inhibiting endothelial cell growth and anglogenesis using calreticulin, useful for suppressing tumor growth

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A novel method of inhibiting endothelial cell growth comprises contacting the cells with calreticulin (or its fragments/variants). Fragments of calreticulin causes at least 40% inhibition of angiogenesis, tumor growth and/or endothelial cell growth (claimed). The method may be used for inhibiting angiogenesis in a patient. The angiogenesis is associated with a disease other than a tumor that is associated with neovascularization (e.g. diabetic neuropathy, retrolental fibroplasia, trachoma, neovascular glaucoma, psoriasis, angiofibromas, immune inflammation, atherosclerosis, excessive wound repair, retinal neovascularization, macular degeneration, corneal graft rejection, contact lens overwear, Crohn's disease, non-immune inflammation, theumatoid arthritis, systemic lupus erythromatosus, thyroiditis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MBP-calreticulin; maltose binding protein; angiogenesis; inhibition; endothellal call; anti-angiogenic; neuroprotective; antidiabetic; cytoStatic; dermalogical; immunosuppressive; antinflammatory; hepatic; anti-atherosclerotic; gastrointestinal; anti-arthritic; ophthalmic.
                                                                                                                                                                                                                                                                                                                                                                                                Inhibiting endothelial cell growth and angiogenesis using calreticulin, useful for suppressing tumor growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Goodpasture's syndrome, systemic vasculitis, scleroderma, Sjorgen's syndrome, sarcoidosis and primary biliary cirrhosis). The method may also be used for treating/inhibiting tumor growth especially

                                                                                                                                                                                                                                                                          ð
                                                                                                                                                                                                                                                                                                                                                            contacting the cells with calreticulin (or its fragments).
Fragments of calreticulin causes at least 40% inhibition of angiogenesis, tumor growth and/or endothelial cell growth (claimed). The method may be used for inhibiting angiogenesis in a patient. The angiogenesis is ussociated with a disease other than a tumor that is associated with neovascularization (e.g. diabetic neuropathy, retrolental fibroplasia, trachoma, neovascular glaucoma, psociasis, angiofibromas, immune inflammation, atheroscierosis, excessive wound repair, retinal concent lens overwear, Crobin's disease, non-immune inflammation, rheumation arbitists, systemic lupus erythromatosus, thyroiditis, coopasture's syndrome, systemic lupus erythromatosus, thyroiditis, syndrome, sarcoidosis and primary cirrhosis). The method may class be used for treating/inhibiting tumor growth especially

                                                                                                                                                                          This sequence is a clq and collectin receptor (cciqR) binding domain. The invention relates to the use of a cclqR binding domain in a medicament to effect complement ubiquitin (CUB) functionality, and an inhibitor of the cclqR binding domain in a medicament to inhibit CUB functionality. The cclqR binding domain, or its inhibitor, can be used to treat a human or animal body. Particularly an inhibitor is used to treat complement activation involved in the initiation and maintenance of inflammation, for example in myocardial infaction, brain isobaemia erythematous, burns, immune complex nephritis, systemic lupus erythematous, burns, immune complex nephritis, and to treat amyloid plaques in Alzachamer's disease. The use of cclqR binding domain or inhibitor enables the CUB domain functionality to be modulated using a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Clq and collectin receptor; cClqR binding domain; complement ubiquitin; CUB functionality; inhibitor; complement activation; inflammation; myocardial infarction; brain ischaemia; gut ischaemia; amyloid plaque; rheumatoid arthritis; systemic lupus erythematosus; Alzheimer's disease; immune complex nephritis; therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence is a clq and collectin receptor (cClqR) binding domain. The invention relates to the use of a cClqR binding domain in medicament to effect complement ubiquitin (CUB) functionality, and an inhibitor of the cClqR binding domain in a medicament to inhibit CUB
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Use of a cClqR binding domain - to modulate complement ubiquitin
a cClqR binding domain - to modulate complement ubiquitin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

The invention relates to the use of a cCIGR binding domain in a medicament to effect complement ubsquitin (CUB) functionality, and an inhibitor of the cCIGR binding domain in a medicament to inhibit CUB functionality. The cCIGR binding domain, or its inhibitor, can be used to treat a human or animal body. Particularly an inhibitor is used to treat complement activation involved in the intriation and maintenance of inflammation, for example in myocardial infarction, brain isohaemia (stroke), gut ischaemia, rheumatoid arthritis, systemic lupus plaques in Alzheimer's disease. The use of cCIGR binding domain or inhibitor enables the CUB domain functionality to be modulated using a
       t
functionality. The cClqR binding domain, or its inhibitor, can be used to treat a human or animal body. Particularly an inhibitor is used to treat complement activation involved in the initiation and maintenance of inflammation, for example in myocardial infarction, brain ischaemia (Stroke), gut ischaemia, rheumatoid arthritis, systemic lupus eythematosus, burns, immune complex nephritis, and to treat amyloid plaques in Alzheimer's disease. The use of cClqR binding domain or inhibitor enables the CUB domain functionality to be modulated using a

C from RNA isolated from nodules excised from patients infected with O. volvulus. The N-terminal is incomplete, however Abs which specifically bind to protein prepd. From induced cultures which specifically bind to protein prepd. From induced cultures of lambda RAL-1 lysogens recognise a single polypeptide of mol. Wt. 42.000 in extracts of adult worms. Analysis deduced sequence suggests that it encodes a protein of mol. Wt. 39,130. If the antigen is not subject to post-translational processing this suggests that most of the coding sequence is present. The three repeats are highly hydrophilic regions likely to be exposed on the surface of the antigen and highly immunogenic. Recombinant antigen expressed by the clone can be used stimulate T-cells of individuals infected by the parasite to proliferate and may be used as the basis for a vaccine against Onchocerciasis or river
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DNA encoding Onchocerca volvulos antigen – used to express recombinant antigen for vaccine against onchocerciasis or river

Recombinant human MBP-calreticulin comprises the sequence of human calreticulin (see AAY92349) without the 17 N-terminal amino acids. A novel method of inhibiting endothelial cell growth comprises contacting the cells with calreticulin (or its fragments/variants). Fragments of calreticulin causes at least 40% inhibition of angiogenesis, tumor growth and/or endothelial cell growth (claimed) method may be used for inhibiting angiogenesis in a patient. The angiogenesis is associated with a disease other than a tumor that is associated with neovascularization (e.g. diabetic neuropathy, retrolental fibroplasia, trachoma, neovascular glaucoma, psorlasis, angiofibromas,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MBP-calreticulin, maltose binding protein; anglogenesis; inhibition; endothelial cell; anti-anglogenic; neuroprotective; antidiabetic; cytostatic; dermalogical; immunosuppressive; antiinflammatory; hepatic; anti-atherosclerotic; gastrointestinal; anti-arthritic; ophthalmic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Inhibiting endothelial cell growth and angiogenesis using calreticulin,
tumor growth and/or endothelial cell growth (claimed). The method may used for inhibiting angiogenesis in a patient. The angiogenesis is associated with a disease other than a tumor that is associated with neovascularization (e.g. diabetic neuropathy, retrolental fibroplasia, trachoma, neovascular glaucoma, psoriasis, angiofibromas, immune inflammation, atheroacclerosis, accessive wound repair, retinal neovascularization, macular degeneration, corneal graft rejection, rheumatoid arthritis, systemic lupus erythromatosus, thyroiditis, goodpasture's syndrome, systemic lupus erythromatosus, thyroiditis, syndrome, sarcoidosis and primary biliary cirrhosis). The method may also be used for treating/inhibiting tumor growth especially
                                                                                                                                                                                                                                                                                                                                                                                                                   DB 21; Length 180;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  A novel method of inhibiting endothelial cell growth comprises
contacting the cells with calreticulin (or its fragments/variants).
Fragments of calreticulin causes at least 40% inhibition of anglogenesis,
tumor growth and/or endothelial cell growth (claimed). The method may be
used for inhibiting anglogenesis in a patient. The anglogenesis is
associated with a disease other than a tumor that is associated with
covereularization (e.g. diabetic neuropathy, retrolental fibroplasia,
trachoma, neovascular glaucoma, psoriasis, anglofibromas, immune
inflammation, atherosclerosis, excessive wound repair, retinal
contact lens overwear, Crohn's disease, non-immune inflammation,
contact lens overwear, Crohn's disease, non-immune inflammation,
contact lens ayetemic lupus erythromatosus, thyroiditis,
doodpusture's syntromic vasculitis, scleroderma, Sjorgen's
systemic vasculitis, systemic vasculitis, scleroderma, Sjorgen's
diso be used for treating/inhibiting tumor growth especially
Kaposi's sarcome (claimed).

neovascularization, atherosclerosis, excessive wound repair, retinal neovascularization, macular degeneration, corneal graft rejection, contact lens overwear, Crohn's disease, non-immune inflammation, freematoid arthritis, systemic lupus erythromatosus, thyroiditis, Goodpasture's syndrome, systemic lupus erythromatosus, thyroiditis, syndrome, sarcoidosis and primary biliary cirrhosis). The method may also be used for treating/inhibiting tumor growth especially Kaposi's sarcoma (claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is calreticulin. It and a C-domain derived peptide (AAAW06736) are useful for treating a patient to inhibit restenosis. The calreticulin-type cpds. are administered either parenterally, intravenously or via a catheter and can target areas of vascular damage

                                                                                                                                                                                                        This sequence is calreticulin, a homologue of Ciq and collectin receptor (CCIqR). The invention relates to the use of a cCiqR binding domain in a medicament to effect complement ubiquitin (CUB) functionality, and an inhibitor of the cCiqR binding domain in a medicament to inhibit can fructionality. The cCiqR binding domain, or its inhibitor, can be used to treat a human or animal body. Particularly an inhibitor is used to complement activation involved in the initiation and maintenance of inflummation, for example in myccardial infarction, brain isohaemia expthematosus, burns, immune complex nephritis, systemic lupus erythematosus, burns, immune complex nephritis, and to treat amyloid plaques in Alzhaimer's disease. The use of cCiqR binding domain or inhibitor enables the CUB domain functionality to be modulated using a

A novel method of inhibiting endothelial cell growth comprises contacting the cells with calreticulin (or its fragments/variants). Fragments of calreticulin causes at least 40% inhibition of anglogenesis, tumor growth and/or endothelial cell growth (claimed). The method may be used for inhibiting anglogenesis in a patient. The anglogenesis is associated with a disease other than a tumor that is associated with neovascularization (e.g. diabetic neuropathy, retrolental fibroplasia, trachoma, neovascular glaucoma, psoriasis, anglofibromas, immune inflammation, atherosclerosis, excessive wound repair, retinal neovascularization, macular degeneration, corneal graft rejection, contact lens overwear. Crohn's disease, non-immune inflammation, rheumatoid arthritis, systemic lupus erythromatosus, thyroiditis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MBP-calreticulin; maltose binding protein; anglogenesis; inhibition; endothelial cell; anti-anglogenic; neuroprotective; antidiabetic; cytostatic; dermalogical; immunosuppressive; antiinflammatory; hepatic; anti-atherosclerotic; gastrointestinal; anti-arthritic; ophthalmic.
                                                                                                                                                                                                                                                                                                     Inhibiting endothelial cell growth and angiogenesis using calreticulin,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Goodpasture's syndrome, systemic vasculitis, scleroderma, Sjorgen's syndrome, sarcoidosis and primary biliary cirrhosis). The method may also be used for treating/inhibiting tumor growth especially

                                                                                                                                                                                                                                                                                                                                                                                          contacting the cells with calreticulin (or its fragments/variants).

Fragments of calreticulin causes at least 40% inhibition of angiogenesis, tumor growth and/or endothelial cell growth (claimed). The method may be used for inhibiting angiogenesis in a patient. The angiogenesis is associated with a disease other than a tumor that is associated with neovascularization (e.g. diabetic neuropathy, retroicherial fibroplasia, trachoma, neovascular glaucoma, propries, angiofibromas, immune inflammation, atherosclerosis, excessive wound repair, retinal neovascularization, macular degeneration, corneal graft rejection, cheumatoid arthritis, systemic lupus erythromatosus, thyroiditis, contact lens overwear, Crohn's disease, non-immune inflammation, rheumatoid arthritis, systemic lupus erythromatosus, thyroiditis, contact measured for treating primary biliary cirrhosis). The method may also be used for treating/inhibiting tumor growth especially kaposi's sarcoma (claimed).
                                                                                                                                                                                                                                                                                                                               ;

A novel method of inhibiting endothelial cell growth comprises contacting the cells with calreticulin (or its fragments/variants). Fragments of calreticulin causes at least 40% inhibition of anglogenesis, tumor growth and/or endothelial cell growth (claimed). The method may be used for inhibiting anglogenesis in a patient. The anglogenesis is associated with a disease other than a tumor that is associated with neovascularization (e.g. diabetic neuropathy, retrolental fibroplasia, trachoma, neovascular glaucoma, psortiasis, anglofibromas, immunue inflammation, atherosclerosis, excessive wound repair, retinal neovascularization, macular degeneration, corneal graft rejection,
                                                                                                                                                                                                                                                                                                                                                                                                                       Goodpasture's syndrome, systemic vasculitis, scleroderma, Sjorgen's syndrome, sarcoidosis and primary biliary cirrhosis). The method may also be used for treating/inhibiting tumor growth especially

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Flea calreticulin protein PCtCall589 (AAW04171) is a calcium-binding protein found in the salivary glands of Ctenocephalides felis. Its amino acid sequence was deduced from a cDNA clone (AAT39516) obtd. from a salivary gland cDNA library. Recombinant PCtCall589 can be produced in host cells transformed with a vector carrying calreticulin nucleic acids. Calreticulin alters the blood feeding behaviour of haematophagous insects and can be administered to an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Haematophagous insect calreticulin protein – used to reduce insect infestation and desensitise patients to allergic dermatitis
                                                                                                                                                                                                                                                                                                                                                         contact lens overwear, Crohn's disease, non-immune inflammation, rheumatoid arthritis, systemic lupus erythromatosus, thyroiditis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Calreticulin; flea; haematophagous insect; allergic dermatitis; vaccine; therapy; PCtCal403.

animal to reduce infestation. It reduces calreticulin activity in lasects, so reducing the insect burden on a minal. Calreticulin can be used to elicit an immune response, thereby desensitising an animal to allergic dermatitis caused by fleas, mosquitoes or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The sequence was deduced from a cDNA clone lambda RAL-1 prepd. from RNA isolated from nodules excised from patients infected with O. volvulus. The N-terminal is incomplete, however Abs which specifically bind to protein prepd. from induced cultures of lumbda RAL-1 lysogens recognise a single polypeptide of mol. wt. 42.000 in extracts of adult worms. Analysis deduced sequence suggests that it encodes a protein of mol. wt. 39.130. If the unities is not subject to post-translational processing this suggests that most of the coding sequence is present. The three

Fragments of calreticulin causes at least 40% inhibition of angiogenesis, tumor growth and/or endothelial cell growth (claimed). The method may be used for inhibiting anglogenesis in a patient. The anglogenesis is associated with a disease other than a tumor that is associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MBP-calreticulin; maltose binding protein; angiogenesis; inhibition; endothelial cell; anti-angiogenic; neuroprotective; antidiabetic; cytostatic; dermalogical; immunosuppressive; antiinflammatory; hepatic; anti-atherosclerotic; gastrointestinal; anti-atthritic; ophthalmic.

The present invention provides the protein and coding sequences for the castor bean calreticulin protein and the calreticulin promoter sequence. In addition, the castor bean calnexin protein, coding sequence and promoter are also described. Calreticulin and calnexin are calcium binding proteins found in the endoplasmic reticulum (er). The calreticulin promoter sequence can be used in vectors to promote the expression of foreign genes, particularly resistance genes, in plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.

                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides the protein and coding sequences for the castor bean calreticulin protein and the calreticulin promoter sequence. In addition, the castor bean calnexin protein, coding sequence and promoter are also described. Calreticulin and calnexin are calcium binding proteins found in the endoplasmic reticulum (er). The calreticulin promoter sequence can be used in vectors to promote the expression of foreign genes, particularly resistance genes, in plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New nucleic acid molecules encoding a calcium binding chaperone protein in endoplasmic reticulum, calreticulin, and calreticulin promoter sequences, useful for producing foreign gene products in plant cells -

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   contacting the cells with calceticulin (or its fragments/variants).

Fragments of calcuticulin causes at least 40% inhibition of angiogenesis, two growth and/or endothelial cell growth (claimed). The method may be tweed for inhibiting angiogenesis in a patient. The angiogenesis, two disease other than a tumor that is associated with necowacciariation (e.g. diabetic neuropathy, retrolental fibroplasia, trachoma, neovascular glaucoma, psoriasis, andiodifficental fibroplasia, trachoma, neovascular glaucoma, psoriasis, andiodifficental fibroplasia, contact lens averaged, crontact lens overweur, Crohn's disease, non-immune inflammation, contact lens averweur, crohn's disease, non-immune inflammation, sandrome, systemic vusculitis, scleroderma, Sjorgen's syndrome, sarcoidosia and primary biliary cirrhosis). The method may calso be used for treating/inhibiting tumor growth especially

Recombinant human MBP-calreticulin comprises the sequence of human calreticulin (see AAY92349) without the 17 N-terminal anno acids. A novel method of Inhibiting endothelial cell growth comprises contacting the cells with calreticulin (or its fragments/variants). Fragments of calreticulin causes at least 40% inhibition of anglogenesis, tunner growth and/or endothelial cell growth claimed). The method may be used for inhibiting anglogenesis in a patient. The anglogenesis is associated with a disease other than a tunor that is associated with neovascularization (e.g. diabetic neuropathy, retrolental fibroplasis, trachoma, neovascular glaucoma, psoriasis, anglofibromas, neovascularization, macular degeneration, corneal graft rejection, neovascularization, corneal graft rejection,
Inhibiting endothelial cell growth and angiogenesis using calreticulin, useful for suppressing tumor growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           contact lens overweer, Crohn's disease, non-immune inflammation, rheumatoid arthritis, systemic lupus erythromatosus, thyroiditis, Goodpasture's syndrome, systemic vasculitis, scleroderma, Sjorgen's syndrome, sarcoidosis and primary biliary cirrhosis). The method may also be used for treating/inhibiting tumor growth especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61 SASFEPFSNKGQTLVVQFTVKHEQNIDCGGGYVKLFPNSLDQTDMHGDSEYNIMFGPDIC 120

A novel method of inhibiting endothelial cell growth comprises
contacting the cells with calreticulin (or its fragments/variants).
Fragments of calreticulin causes at least 40% inhibition of anglogenesis,
tumor growth and/or endothelial cell growth (claimed). The method may be
used for inhibiting anglogenesis in a patient. The anglogenesis is
associated with a disease other than a tumor that is associated with
neovascularization (e.g. diabetic neuropathy, retrolental fibroplasia,
trachoma, neovascular glaucoma, psoriasis, angiofibromas, immmune
information, atheroscalerosis, excessive wound repair, retinal
neovascularization, macular degeneration, corneal graft rejection,
contact lens overwear, Crohn's disease, non-immune inflammation,
rheumatoid arthritis, systemic lupus erythromatcosus, thyroiditis,
doodpasture's syndrome, systemic vasculitis, scleroderma, Sjorgen's
syndrome, sarcoidosis and primary biliary cirrhosis). The method may

                This sequence is calreticulin, a homologue of Clq and collectin receptor (cClqR). The invention relates to the use of a cClqR binding domain in a madicament to effect complement ubiquitin (CUB) functionality, and an inhibitor of the cClqR binding domain in a medicament to inhibit CUB tunctionality. The cClqR binding domain in a medicament to inhibit CUB tunctionality. The cClqR binding domain, or its inhibitor, can be used to complement activation involved in the initiation and maintenance of inflummation, for example in mycardial infarction, brain ischaemia (HITOKO), gut ischaemia, rheumatoid arthritis, systemic lupus erythemategus, burns, immune complex nephritis, and to treat amyloid plagues in Alzhaimar's disease. The use of cClqR binding domain or inhibitor enables the CUB domain functionality to be modulated using a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The prenent sequence is calreticulin. It and a C-domain derived poptide (AAW06736) are useful for treating a patient to inhibit restenosis. The

Its amino acid sequence was deduced from a cDNA clone (AAT39516) obtd. from a salivary gland cDNA library. Recombinant PCtCal1589 can be produced in host cells transformed with a vector carrying behaviour of haematchphaqous insects and can be administered to an animal to reduce infestation. It reduces calreticulin activity in insects, so reducing the insect burden on an animal. Calreticulin activity in animal to reduce infestation. It reduces the constitution is animal. Calreticulin activity in animal to a least to end immune response, thereby desensitising an cullicoides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Haematophagous insect calreticulin protein - used to reduce insect infestation and desensitise patients to allergic dermatitis

Human secreted proteins have activities based on the tissues and cells the genes are expressed in Examples of activities include: cytostatic; immunostimulant; antiproliferative; cariant; antiant; antiparasitic; neuroprotective; nootropic; antiinflammatory; antiangiogenic; anti-HIV; and antianteriosclerotic. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; secreted protein; cytostatic; immunostimulant; antiproliferative; cardiant; antiarrhythmic; antiviral; antibacterial; antifungal; cancer; antiparsitic; neuroprotective; noctropic; antifilammancry; anti-HIV; antiangiogenic; antiarteriosclerotic; diagnosis; immune discorder; AIDS; autoimmune disease; haematopoietic cell disorder; blood protein disorder; adammaglobulinaemia; hyperproliferative disease; Gaucher's disease; cardiovascular disorder; congenital heart defect; pulmonary atresia; arrhythmia; ischaemia; andiogenesis related disorder; Crohn's disease; atherosclerosis; neurological disease; Alzheimer's disease;

                                                                 The sequence was deduced from a cDNA clone lambda RAL-1 prepd.

from NAM isolated from nodules excised from pattents infected
with O. volvulus. The N-terminal is incomplete, however Abs
with Specifically bind to protein prepd. From induced cultures
of lambda RAL-1 lysogens recognise a single polypeptide of mol.
wt. 42.000 in extracts of adult worms. Analysis deduced sequence
unquents that it encodes a protein of mol. wt. 39,130. If the
antiqen is not subject to post-translational processing this
antiqen is not subject to post-translational processing this
surface of the antigen and highly immunogenic. Recombinant
the surface of the antigen and highly immunogenic. Recombinant
antique expressed by the clone can be used stimulate T-cells of
individuals infected by the parasite to proliferate and may be
used as the basis for a vaccine against Onchocerciasis or river

                                                                                                                                                                                      The present invention provides the protein and coding sequences for the castor bean calreticulin protein and the calreticulin promoter sequence. In addition, the castor bean calnexin protein, coding sequence and promoter are also described. Calreticulin and calnexin are calcium binding proteins found in the endoplasmic reticulum (er). The calreticulin promoter sequence can be used in vectors to promote the expression of foreign genes, particularly resistance genes, in plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention provides the protein and coding sequences for the castor bean calreticulin protein and the calreticulin promoter sequence.
